

Bîzîc Eduard-Mihai

STUDENT

OBJECTIVE

Learn as much as possible about frontend and software. I like to test the programs I write to make sure the result is the desired one. I am a sociable person, I adapt quickly and I work very well on a task-based basis.

EXPERIENCE

SCANSTART practice

Apr 2025, three weeks

First practice in year 2 at ScanStart where I worked with the team on updating a website using WordPress. I noticed that I become extremely motivated when I receive tasks and I try to finish them as quickly as possible

TASK MANAGER PROJECT

First project

I developed an application using Next.js and TypeScript. I integrated Clerk for secure user authentication and used React. As my first project in the faculty, I am very satisfied with it.

STUDENT PLATFORM PROJECT

The first complex project using HTML5, CSS3 and JavaScript (ES6+). It is a project that I worked on in a team with 3 other colleagues. I took care of the frontend part of the site which can be seen in the presentation in the link.

PADEL CLUB BOOKING PLATFORM

The first functional website for a padel court in Sibiu. Improve using HTML5, CSS3 and JavaScript. It was a challenge because it was no longer a game, I had to do things as well as possible to meet the requirements. I managed to do this, so I continue to take care of updates and maintenance of the site.

BIG NUMBER CALCULATOR

A project that aimed to be able to perform calculations with numbers over 100 digits. It was done in java, I used the BigDecimal library for the best possible precision. Using vectors was the first option but I wanted a cleaner code.

ABOUT ME

I am a very calm person and pay attention to details. In my free time I help some of my friends' businesses with marketing. I have quite a lot of free time and I want to not sit idle and always find something to do. I don't like the idea of just going to college and not doing anything else. I am very active, sociable and I like working in a team.
